

# SCFA – Training Bulletin 22-08

## Oil Burner Emergencies

Response may be due to a **malfunctioning oil burner**

**Puff Back or Delayed Ignition** – building may be filled with smoke; a fire may still be burning in firebox. Use dry chemical extinguisher or foam, water may cause damage and injuries to firefighters

**Blocked or Dislodged Flue Pipe** – building filled with smoke and high levels of CO. Verify levels with 2 CO meters.

**Check for fire extension** and account for all occupants. Check all floors for anyone who may be overcome.

## Fire Department Actions

- **Emergency Shut Off Switch is used to de-energize unit**
- **Ventilate area if needed**
- **Stretch a hose line**
- **Shut Off fuel supply**
- **Check for fire extension around and above unit. CO may be present on all floors**
- **Have occupant call for service company & may need to relocate, due to no heat in building.**
- **SCBA to be worn**
